

fcBookTracker / fcAssetTracker

fcBookTracker allows staff to manage the checkout of school resources. Patrons can be regularly updated from your student records system, such as fcSchool®. fcAssetTracker allows district office staff to access and manage tracked assets of the organization.

Both fcBookTracker and fcAssetTracker manage item checkouts with the ease of a barcode scanner and these items can be viewed by all involved. Both applications can be adapted for non-school district organizations requiring management and tracking of resources or assets with customers and employees.

- **fcBookTracker and fcAssetTracker maximize the technology investment in Open Text's FirstClass**
- **fcBookTracker and fcAssetTracker leverage the powerful, online, collaborative environment of FirstClass software, securely from work or home**
- **fcBookTracker and fcAssetTracker manage the tracking of resources and assets within districts or companies, in multiple schools or offices, with many staff members, students, and clients**

As FirstClass® resource management “add-on” applications, fcBookTracker™ and fcAssetTracker™ are the solutions to managing and tracking textbooks and assets directly within FirstClass.

ENHANCE YOUR ONLINE LEARNING COMMUNITY

FirstClass is a strong, collaborative system that can be used to facilitate communication within a district, school or organization.

Freedom with fcBookTracker!

Tired of being tied to the one resource tracking computer your school or office has? Need a reliable application to accurately track the resources signed out by teachers and students or customers?

The main window of fcBookTracker allows staff to access a variety of modules within the system. The primary module is called the Checkout which allows users to scan in barcoded items using a handheld scanner. Barcode generation and printing is a sleek feature to both fcBookTracker and fcAssetTracker. Items can be associated with staff or student or customer to checkout for a specific period of time, with or without a due date. “My Items” shows patrons what they have currently signed out. Other modules incorporate suppliers, event auto-email, and notes.

Empowerment with fcAssetTracker!

Ever run past a product warranty without realizing it? Want a concise record of important items in the division or organization?

fcAssetTracker allows for the management of assets of all schools or offices within your district or organization, including the checkout and return of items, as well as the sending or printing of staff asset notices. Search for an employee who is in possession of an asset, create a product order, or contact a supplier. Manage a product list at the district or organizational level. Barcode items can be set up and checked out with or without a warranty auto-notification, using a handheld scanner. Employees are able to view “My Items” learning when assets are due or to view what is available to sign out.

By consolidating your users' collaboration and data management to a single platform, it becomes easier for the end user to adopt, access, and succeed at managing the needs of your organization.

DATA PROTECTION

fcBookTracker and fcAssetTracker data is instantly available regardless of workstation or software on a specific Windows or Mac computer using the FirstClass client. Data changes made within these applications are published and viewable immediately. For school districts, student and staff resources that are managed in fcBookTracker or fcAssetTracker can be regularly updated from a student information system, such as fcSchool, including an initial batch import of staff and students, to minimize system administration.

Exploiting the ability to situate a FirstClass server at a central office, it is not necessary to provision a server for individual schools or offices. In fact, an installation of fcBookTracker and fcAssetTracker can be used to track textbooks and assets, respectively, for the entire district or organization.

FirstClass provides seamless access to the data that is backed up automatically and is stored centrally. Security protocols ensure protection of privacy.

OTHER COMPATIBLE SOLUTIONS

fcTimesheet™:

Employee activity management and time tracking

fcLearnerPlan™:

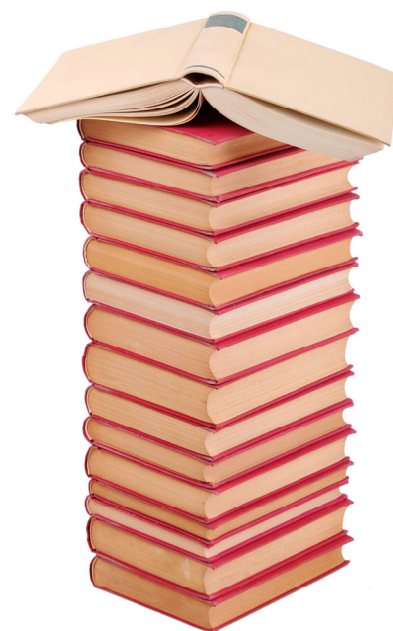

Facilitated student learning plan (IEP/IPP) management

fcConnect™:

Outcome based student assessment, district report cards, gradebooks, progress reports, standardized test tracking, attendance and communication management

fcSchool®:

Student information management of student profiles, registrations, fees, class enrollments, schedules, reporting, communication, grades, transcripts, and forms

Bramm Technologies Inc. is a Canadian based software development and consulting company that has been incorporated since 2003.

Our commercial solutions are designed to consolidate our clients' data management processes to FirstClass®: a communication and collaboration platform widely used by school districts and corporations world-wide. Leveraging FirstClass, the access and management of organizational data can be achieved from virtually any location having an internet connection, in a secure manner.
